

Revolution
redefine possible.

It's time to **redefine possible.**

In recent years, businesses around the world have intensified their focus on implementing sustainable practices and reducing their environmental impact. For plastic film in particular, effective, sustainable solutions have proven to be elusive for most. Companies are in need of smarter plastic options that provide long-term sustainability for the environment — and for their business.

A **revolutionary** approach

At Revolution, we are redefining what's possible with a unique, circular approach to sustainability that embraces the entire plastics life cycle. We not only make the highest quality plastics, we also collect and recycle them to create a continuous cycle of sustainability. This holistic approach delivers effective, scalable products and solutions that meet the needs of businesses today, while helping them build a more sustainable business tomorrow. In everything we do, we're guided by four key beliefs:

WE BELIEVE IN PLASTIC'S POTENTIAL. For over 30 years, we've dared to think differently about plastics. Where others see landfills and waste, we see a valuable resource that can have infinite usefulness if we recover and reuse it responsibly.

THE GOOD PLASTICS PEOPLE. We're here to unite our partners, clients and vendors under one powerful mission: creating and championing solutions that empower everyone to contribute to a more sustainable future.

GREEN MEANS GROWTH. Through sustainability, we all flourish. By creating effective solutions for today and scaling solutions to create more sustainable growth tomorrow, we not only help the environment, but we also help our partners meet ESG goals, achieve industry leadership and build brand recognition.

INFINITE IMPACT. By working across the full value chain, from collecting and recycling to developing specific market applications for our recycled resins, we're able to optimize each step in the process and deliver superior solutions.

300+

million pounds of materials recovered and processed each year

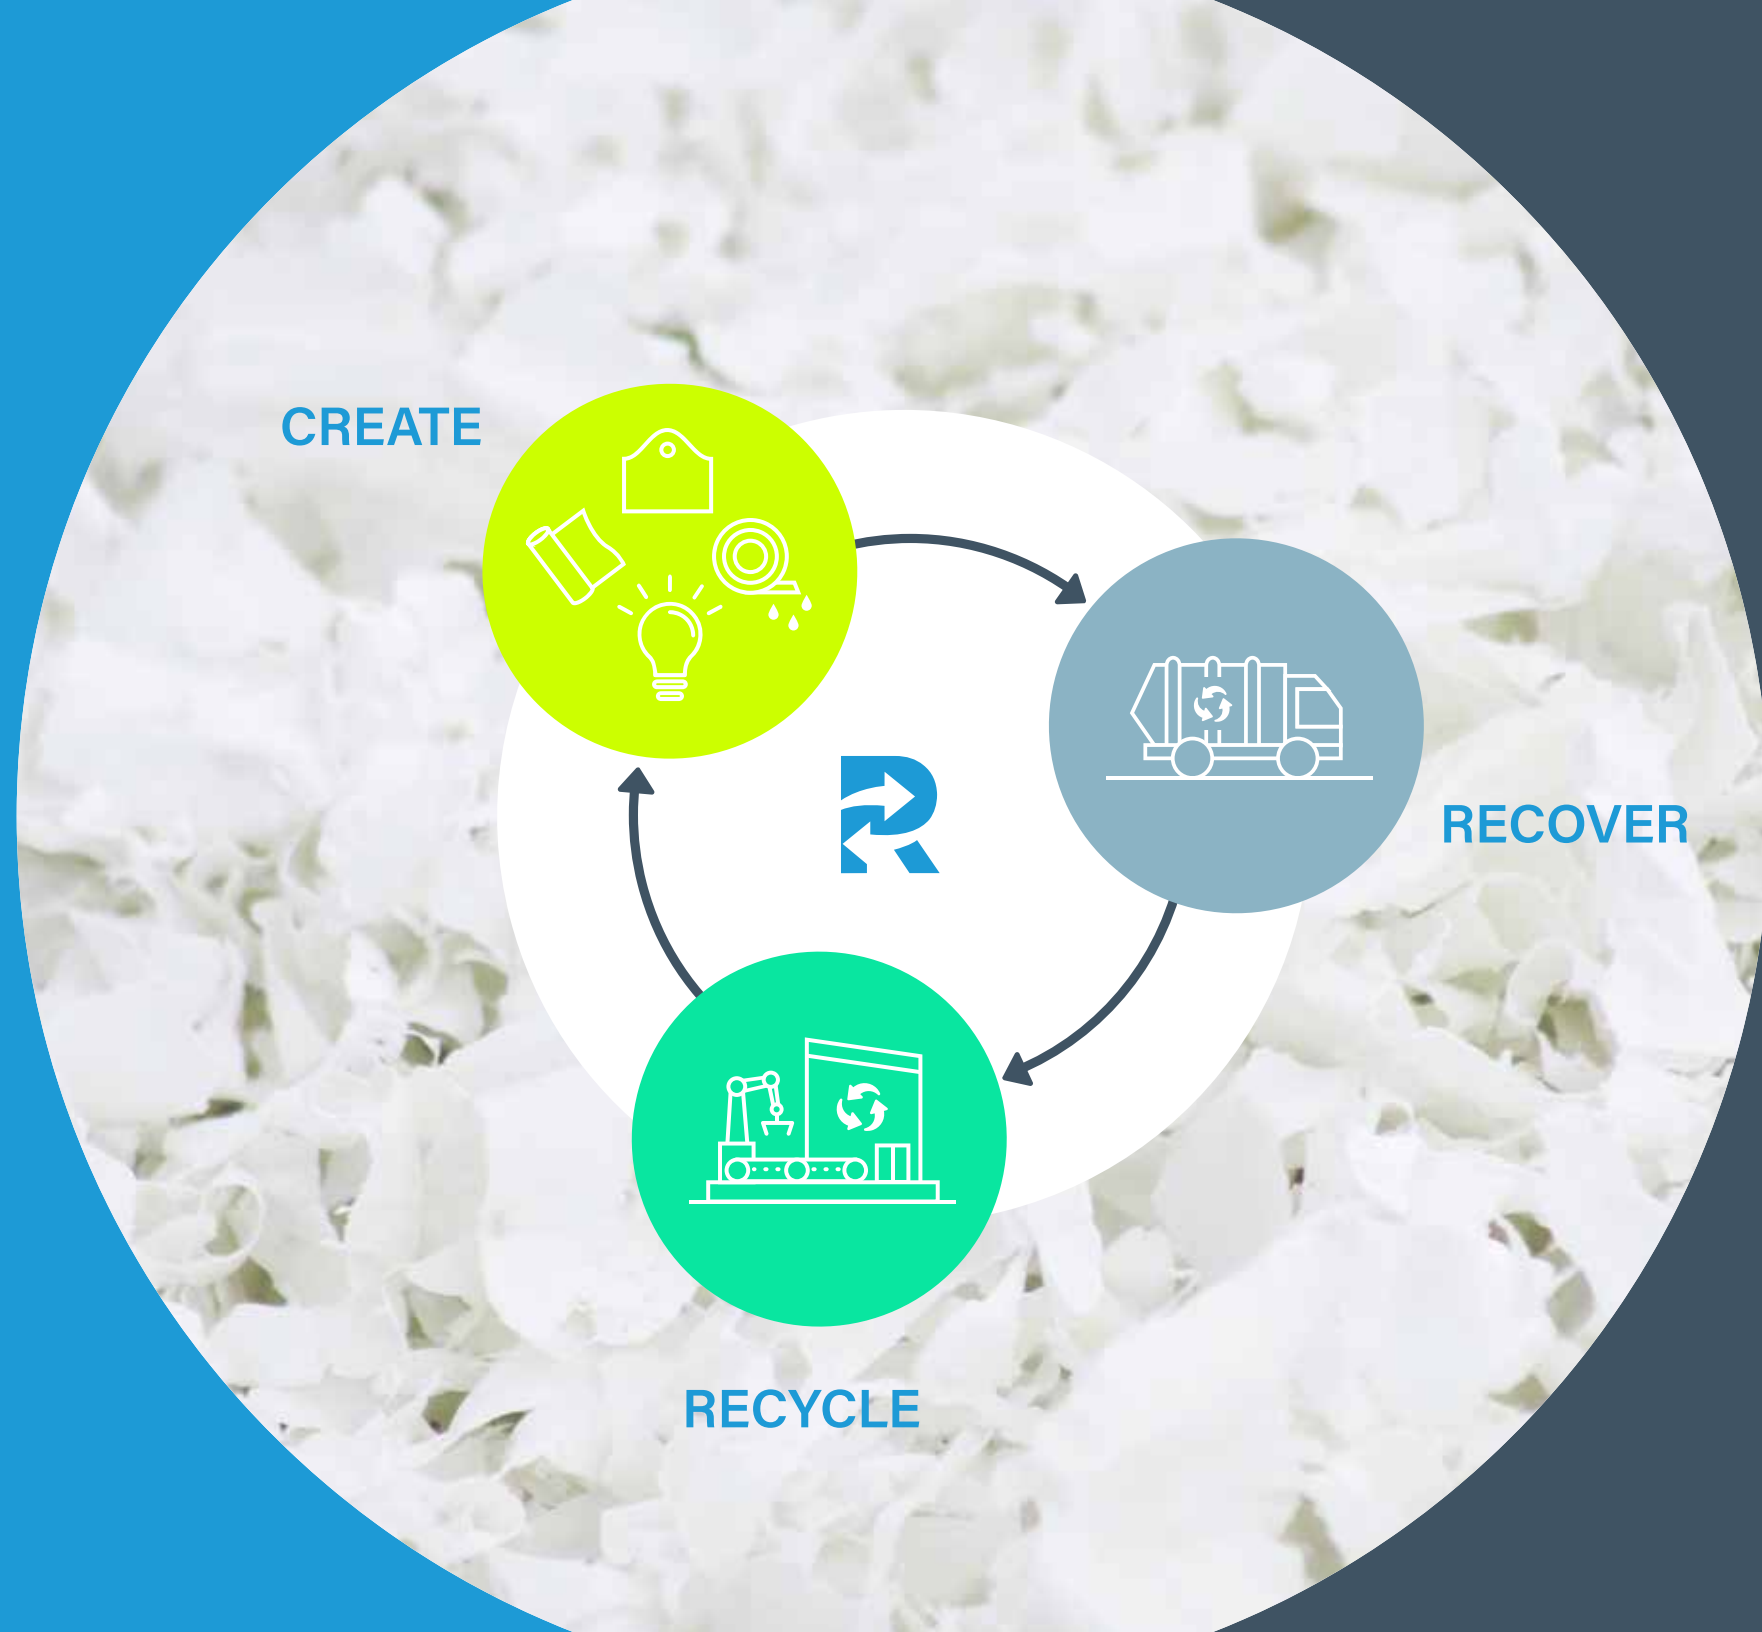

We create resin-based products composed of up to

97%

recycled materials

3 BILLION

pounds of plastic diverted from landfills since our founding

Where sustainability comes **full circle**

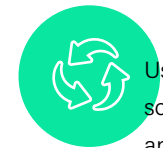

Revolution enables you to take a more comprehensive approach to sustainability that covers the full plastics lifecycle of **creating, recovering, recycling** and **reusing**. This allows you to create more value from plastics, while maintaining the smallest carbon footprint possible.

With our sustainable solutions, you'll meet your business needs, while gaining valuable and measurable data that shows how your brand is playing a part in the sustainability movement, leading the way in smarter business solutions, and delivering more environmentally-responsible products to your customers.

We are innovators and experts in plastics manufacturing, recycling and recycled resins. Our 30-year history of developing sustainable solutions via our circular approach makes us an ideal partner to help you implement more sustainable solutions for your business.

Using our circular approach, we provide you sustainable solutions that help your business reduce its environmental impact and support a more sustainable future.

We're large, national, stable and vertically-integrated, but also offer flexibility, agility and the ability to tailor our solutions to your needs.

As a longtime customer of Revolution's trash can liners made from recycled plastic, Chipotle turned to us to collaborate on a solution to reduce plastic waste created from 200 million gloves used in its nationwide restaurants each year. Previously, **95% of the gloves were landfill-bound with no commercially viable recycling option.**

from gloves

to bags

Enter our innovative gloves-to-bags program. Chipotle employees now drop their used plastic gloves in a cardboard box. Once it's full, the box is shipped to our facilities where the gloves are cleaned, shredded and turned into post-consumer recycled (PCR) resin to make the trash bags Chipotle was already using, **creating a custom closed-loop program.**

CLOSED-LOOP SUCCESS >

1400+

Employees worldwide who specialize in manufacturing, mechanical recycling, resin and consumer trends

100 BILLION

gallons of water are saved annually thanks to our irrigation planning software

#1

largest recycler of agricultural film in the world

Take a more well-rounded view

Revolution expands the way you think about sustainability by delivering solutions in four key service areas:

CUSTOM CLOSED-LOOP PROGRAMS

We partner with you to examine your processes, manufacturing and supply chain, and identify opportunities to increase your sustainability through tailored circular solutions. Areas that you may view as liabilities and inefficiencies might be untapped opportunities to increase sustainability and reduce waste.

SUSTAINABLE PRODUCTS

We manufacture high-quality, competitively priced products made with up to 97% recycled resin. Our products are used in applications in the agricultural, construction, manufacturing, retail and food service industries, and let you work more responsibly — without compromising costs.

COLLECTIONS & RECYCLING

Using our proprietary process to collect, clean, segregate and convert plastics into high-quality recycled resins, we're able to recover and process millions of pounds of material each year — including many of our own products. This diverts plastic waste from landfills and creates a reliable stream of material to feed our ongoing manufacturing.

SUSTAINABLE MATERIALS

In addition to using our own certified, recycled resins in our products, we partner with global brands and OEMs to incorporate recycled content into their products. We offer a broad line of linear and low-density polyethylene PCR and PIR resins. Our high-quality polyethylene resin is ideal for use in a wide variety of flexible film products, including food packaging, poly mailers, California's SB270 certified reusable bags, trash can liners, carryout bags, stretch hood and wrap, and protective films for retail packaging.

Join our **circle**

The future is sustainable. At Revolution, we're leading the way with a better, smarter approach to plastics, and serve businesses in industries ranging from agriculture and food service to airports and entertainment venues. Consumers and companies rely on Revolution to provide sustainable, high-quality plastic solutions through our five divisions: **Sustainable Agriculture, Sustainable Commercial, Sustainable Consumer, Sustainable Stretch Solutions** and **Sustainable Materials**. We're all working together to protect the environment — while improving the way businesses operate.

If you're serious about finding smarter, more effective approaches to sustainability, contact us to discuss how we can help you meet your goals and operate more responsibly. **Together, we can redefine possible.**
